

TANZEEM-E-ISLAMI

Striving for the Law of Allah, on the Land of Allah

PERSPECTIVE

The official online newsletter of Tanzeem-e-Islami

... Uploaded twice a month to [www. Tanzeem.org](http://www.Tanzeem.org)...

'PERSPECTIVE' is a trend-setting newsletter issued by Tanzeem-e-Islami that focuses on a candid commentary on the current national and international issues, in the light of the Qur'an and the Sunnah.

A blend that gives Muslims an insight into the events of the past, those happenings at present and the Signs of things to come...

From the Qur'an:

"And when it is said to them, "Do not cause corruption on the earth," they say, "We are but reformers."

"Unquestionably, it is they who are the corrupters, but they perceive [it] not.

(*Surah al-Baqarah: Verses 11 & 12*)

Selected Hadith:

Narrated Hudhaifa bin Al-Yaman (RA):

"The people used to ask Allah's Apostle about the good but I used to ask him about the evil lest I should be overtaken by them. So I said, "O Allah's Apostle! We were living in ignorance and in an (extremely) worst atmosphere, then Allah brought to us this good (i.e., Islam); will there be any evil after this good?" He said, "Yes." I said, "Will there be any good after that evil?" He replied, "Yes, but it will be tainted (not pure)." I asked, "What will be its taint?" He replied, "(There will be) some people who will guide others not according to my tradition? You will approve of some of their deeds and disapprove of some others." I asked, "Will there be any evil after that good?" He replied, "Yes, (there will be) some people calling at the gates of the (Hell) Fire, and whoever will respond to their call, will be thrown by them into the (Hell) Fire. "....."

(*Sahih Bukhari, part of Hadith 199, Volume 9, Book 88*)

EDITORIAL

All praise is due to Allah (SWT), and peace & blessing on his noble Messengers (AS), in particular, on the last of them all the blessed Prophet Muhammad (SAAW).

The recent surge in global drive in the fields of population and birth control, cloning experimentations and eugenics is no accident. The shocking news that a team of scientists working in China have managed to gene-edit the DNA of recently-born human twins to allegedly make them genetically immune to a HIV infection is more than bizarre and, frankly, irresponsible. It suggests that certain researchers are making dangerous experiments to create ultimately the eugenics master dream—custom-designed humans. We can call them "Golem babies" because when technology begins cutting and splicing the human DNA without certitude, let alone the religious and moral implications of such actions, the consequences for the human species are ominous.

In medieval and ancient Jewish folklore a Golem is a being that is magically created entirely from inanimate matter such as mud. Golems have no soul. Similarly, when we go behind the surface stories of the China experiment that claims to have "produced the first successful genetically modified humans," it becomes evident that the "folklore" is not just a "fable with a moral", but part of a larger conspiracy to create a super-race – a concept not alien to Zionism!

First of all the public story retailed by Chinese media and by the researcher, Chinese Professor He Jiankui, a Stanford University post-doctoral research graduate, does not ring honest. He, who is professor at Southern University of Science and Technology, claimed at a Human Genome Editing conference in Hong Kong on November 28, and on YouTube, that he had successfully modified two embryos produced from the sperm of an HIV-positive donor and implanted them in a healthy mother, who gave birth to twin girls earlier this month. He used the most common "gene-editing" tool, CRISPR-cas9, to deactivate a gene called CCR5 that acts as a 'doorway' to allow the HIV virus to enter a cell. He basically claimed to have created the world's first gene-edited humans, and announced that a second woman was pregnant with another of his gene-edited embryos.

Other scientists have severely criticized He Jiankui for engaging in the human gene altering experiments. What He Jiankui claims he did, to alter the DNA of human embryos, known as germ line gene editing, means the changes in those genes could be passed on and inherited by the next generations. Moreover, as several scientists involved in developing CRISPR have warned, He Jiankui is in fact changing the human gene pool. "We may not be able to see the impact of this until several generations later," said Dennis Lo Yuk-ming, chairman of Chinese University's Department of Chemical Pathology.

The scientist who first suggested developing gene drives in gene editing, Harvard biologist Kevin Esvelt, has publicly warned that development of gene editing, in conjunction with gene drive technologies, have alarming potential to go awry. He Jiankui notes how often CRISPR messes up and the likelihood of mutations arising,

(Continued on Page 2)

Editorial*(Continued from page 1)*

making even benign gene drives aggressive. Kevin Esvelt stresses, “Just a few engineered organisms could irrevocably alter an ecosystem.” Esvelt’s computer gene drive simulations calculated that a resulting edited gene, “can spread to 99 percent of a population in as few as 10 generations, and persist for more than 200 generations.” Esvelt was discussing gene editing of mosquitoes. Now we are moving on to gene editing of human embryos. Adding to the drama, at the Hong Kong gene editing conference where He Jiankui proudly announced his results for the first time, Professor He refused to answer questions as to who paid for his work, or why he kept his work secret until after it was done. Chinese officials claim they had no knowledge of Professor He’s project. There has been no independent confirmation of Professor He’s claim, nor has he yet published in any scientific peer-reviewed journal on it. Adding to the questions around the case, Dr Michael Deem, a bio-engineering professor at the esteemed Texas Rice University, has been revealed to have worked on the gene-editing project using humans together with Professor He. He Jiankui got his PhD at Rice in 2010 and that year began co-authoring scientific papers with Deem. Deem also reportedly has a financial interest in two gene-editing companies that the enterprising Professor He has set up in China. Dr. Deem, who also receives research money from the US government National Institutes of Health, did not inform Rice University of his involvement in what under current US law is illegal.

Professor He Jiankui has in the meantime been ordered to stop his human experiments with gene-editing, pending a government investigation. Professor He declared that Chinese law, which is apparently vague on the issue, does not prohibit gene-editing with human subjects. What is clear is that, as in many areas, China sees itself in a technology race with the West. As part of the 10 development priorities of its ambitious Made in China 2025 strategy, the government lists “Biotechnology” as a priority area. Unfortunately, the government does not exclude proven harmful biotech areas such as Genetically Manipulated Organisms or GMOs. In 2017 the state-owned ChemChina took over the Swiss-based Syngenta, the world’s largest agri-chemical producer, and third largest in GMO seed patents. In the area of toxic plant herbicide, glyphosate, designated by a WHO agency a “probable carcinogen,” Chinese companies make up by far the world’s largest producers. In 2017, the global glyphosate production capacity was 1,065,000 tons. Of that was 380,000 tons by Monsanto and 685,000 tons of Chinese enterprises. Now it appears that China is moving to become world leader in gene-editing. In January the US National Science Foundation released its annual report, Science and Engineering Indicators: 2018 report. It noted that while the USA still led in science and technology development, that “the US global share of S&T activities is declining as other nations — especially China — continue to rise.” Gene editing and Artificial Intelligence were two areas of rapid Chinese development they cited.

What is not yet clear is whether certain US Government agencies such as the National Institutes of Health which funds Deem at Rice is quietly funding the Professor He human gene-editing projects, taking advantage of the lax regulatory regime there. Or whether the spooky Pentagon research arm, DARPA, is involved. DARPA’s “Insect Allies” program “aims to disperse infectious genetically modified viruses that have been engineered to edit crop chromosomes directly in fields.” This is known as “horizontal inheritance” as opposed to the dominant vertical method of GMO alteration that make laboratory-generated modifications into target species’ chromosomes to create GMO plant varieties. The genetic alterations to the crops would be carried out by “insect-based dispersion” in free nature. A group of European scientists noted that no compelling reasons have been presented by DARPA for the use of insects as an uncontrolled means of dispersing synthetic viruses into the environment. Furthermore, they argue that the Insect Allies Program could be more easily used for biological warfare than for routine agricultural use. At this point it seems that the Chinese government is taking steps to rein in the rogue Professor He and his research. What is not clear however, is whether this is cosmetic in an attempt to diffuse enormous criticism of the Professor He human gene-editing. Earlier this year the Wall Street Journal reported that according to review of Chinese scientific journal articles, since 2015 at least 86 people have been subject of gene-editing experiments. They reported that in 2015 it began when 36 patients with kidney, lung, liver and throat cancers had cells removed that allowed were then gene-edited and replanted in the human bodies to supposedly combat their cancer. The newspaper noted that none of the clinical trials have been formally published.

The entire field of gene-editing as with the Genome Project and GMO patented seeds, is a decades-long dream of some very influential actors such as the Rockefeller family and Bill Gates in what is called eugenics. The effort is based on fatally-flawed scientific reductionism that claims that the complexity of life can be reduced to a single gene that in turn can be modified at will. In a recent post on the flaws of gene-editing, namely the assertion that thousands of diseases are caused by malfunction of one gene, a hypothesis yet to be proven, researcher Jon Rappoport, who sees gene-editing as “part and parcel of the trans-human agenda,” quotes Gregory Stock, former director of the program in Medicine, Technology, and Society at the UCLA School of Medicine. Stock says:

“Even if half the world’s species were lost [during genetic experiments], enormous diversity would still remain. When those in the distant future look back on this period of history, they will likely see it not as the era when the natural environment was impoverished, but as the age when a plethora of new forms—some biological, some technological, some a combination of the two—burst onto the scene.”

Scientists, including some of the original inventors of gene-editing technologies, who call for a world moratorium on gene drives and gene-editing until the science can be conclusively proven safe, perhaps gain the ear of the world after the shocking Chinese human gene-editing reports. Something that Bill Gates, The Rockefeller family and DARPA back cannot be “good.”

What we would like for our readers to reflect upon is a simple assertion: The developments in the field of eugenics and the targeted attack on the institution of family (by using narratives such as safe sex, birth control and population control) are intertwined and are serving the purpose, wittingly or unwittingly of the un-Godly aims of the global elite. We consider it our responsibility to advise our Muslim brethren to take everything being propagated in the form of “modern narratives” with a pinch of salt. May Allah (SWT) save us all from following in the footsteps of accursed Satan. **Aameen!**

Signing off...**Dr. Absar Ahmad (Chief Editor)**

Press Releases issued by Tanzeem-e-Islami

Date: 7 December 2018

Lahore (PR): “Despite being an Ideological state, Pakistan could not become a model Islamic Welfare State.”

This was said by the Ameer of Tanzeem-e-Islami, **Hafiz Aakif Saeed**, in a statement. The Ameer lamented that our perennial enemy, India, was inviting us to become “secular” because we had failed miserably in making Pakistan an Islamic Welfare State in practice.

He noted that the stern reply by our political leaders and DG ISPR to the Indian Army Chief that Pakistan was established on the basis of Islam, while India, which claims to be a secular state, had itself blatantly flouted all principles of secularism by oppressing minorities and destroying their places of worship, was praiseworthy.

The Ameer remarked that the fact of the matter was that while the state of Pakistan was an Islamic State with respect to its constitution, however, practically we were on the path of embracing secularism, which was very disturbing.

That is the reason why our enemy was taking advantage of our practical doubts and conflicts, and was inviting us to become secular on the ideological and constitutional fronts too, the Ameer added.

The Ameer concluded by stating that if Pakistan became a genuine Islamic Welfare State on the practical front too, then our enemy would never dare make such ridiculous demands from us to mould ourselves in a secular country.

Date: 14 December 2018

Lahore (PR): “It is not only unfortunate but also very shameful that the bill directed at totally prohibiting the sale of alcohol was not allowed to be tabled for legislation in the lower house.”

This was said by the Ameer of Tanzeem-e-Islami, **Hafiz Aakif Saeed**, in a statement. The Ameer noted that the statement made by the parliamentarian Dr Ramesh Kumar was very true that in the God-gifted State of Pakistan, Muslims used the shoulder of non-Muslims to shoot their own gun in order to get access to alcohol for consumption, although the use of alcohol was neither lawful nor permitted in any religion. The Ameer lamented that it was unfortunate that both the treasury and the opposition benches of the lower house had unanimously opposed tabling of the said bill directed at the prohibition of alcohol. While severely criticizing the house, the Ameer remarked that people with such attitude had no right whatsoever to represent Muslims in the parliament of our country.

While commenting on the recent blacklisting by the U.S. of Pakistan and Saudi Arabia on grounds of “religious freedom violations”, the Ameer said that the U.S. action was synonymous to the pot calling the kettle black! He added that USA was itself an embodiment of discrimination on the basis of religion, race and ethnicity. The Ameer posed the question that why did the brutal atrocities committed in Kashmir and Palestine by the states of India and Israel on purely religious basis remain “hidden” from USA. The fact is, the Ameer remarked, that global powers, especially USA, had succumbed to the worst kind of Islamophobia. The Western Capitalist System felt threatened by the System of Islam, he added. The Ameer concluded by stating that they feared that the Capitalist System, created and nourished by the worst imaginable oppression of humans at the hands of other humans, could be conquered and routed at any time by the System of Islam, which is based on Social Justice for all.
